Utility Work to Begin in the Area of Congress, Gilman Streets

Beginning Monday, June 10, contractors will begin doing work in the area of Gilman and Congress streets to install underground conduits and reroute local electrical and telecommunications utilities through them.

This work is in advance of the removal of the Gilman Street parking garage and subsequent construction of a medical building at the corner of Gilman and Congress. Two lanes of traffic will be open on Congress throughout the project, with flaggers and signage to assist travel. Some on-street parking in the immediate area will be impacted during the project, which is expected to last into late fall.
