Upcoming Work on MMC Visitors Garage

Maine Medical Center's contractors will be installing metal paneling and fencing onto its Visitors Garage from Nov. 30 through most of December. Contractors will work to complete the project sooner as weather allows.

The additional architectural metal panels requested by the city in public discussions a year and a half ago will require structural steel and the use of a crane. This effort will necessitate the blocking of up to a dozen parking spaces on both sides of Congress Street, as well as the blocking of the sidewalk on the garage side of the street.

At times, access to and egress from the parking garage will be limited to one lane, and controlled by a flagger.
