

MMC IR residents at the PGY-2 level or above can choose to staff offsite MRI and CT scanners in order to monitor for and treat possible contrast reactions. The MRI shifts are on weekday evenings from 5-7:30 PM and on weekends from 7AM - 7PM. The CT shifts are on Saturdays from 8AM - 5PM. Residents who wish to pursue these opportunities need to be in good standing and require approval and continuing oversight by the program director and the Clinical Competency Committee. Furthermore, any hours spent moonlighting count toward the clinical and educational work hour limit of 80 hours per week (averaged over a four-week period).
