

## How To Take Your: **RespiClick Breath-Activated Inhaler**

1. Make sure the cap is closed before each dose. Do not open the cap unless you are taking a dose.

2. Hold the inhaler upright as you open the cap fully.

3. Open the cap all the way back until you hear a “CLICK”. Your RespiClick inhaler is now ready to use.

4. Turn your face away and breathe out. Do not blow into the inhaler.

5. Do not let your lips or fingers block the vent above the mouthpiece.
6. Put the mouthpiece in your mouth and close your lips around it. Breathe in deeply through your mouth, until your lungs feel completely full of air. Hold your breath and count to 10 slowly. Blow out gently.

7. Close the cap until you are ready to take your next dose.

### Tips:

- Store your inhaler in a cool, dry place.
- Do not put any part of your inhaler in water.
- Wipe the mouthpiece with a dry cloth or tissue.
- The dose counter tells you how many doses are left in your inhaler.
- Your inhaler does not need priming or a spacer.
