

Help us better understand the long-term effects of COVID.

Have you or someone in your family had COVID? Or are you feeling the long-term effects of COVID (also called Long COVID)? If so, you may be able to help us understand this illness and how to treat it. You might be able to help even if you haven't had COVID.

We are doing studies across the country. Learn how you can be a part of the study at: [MaineHealth](#)

You may be able to be in the study if you:

- Are 18 years of age or older
- Have or haven't had COVID
- Can take part for up to 4 years, depending on when you join

What we may ask you to do:

- Do surveys (answer questions) every 3 months
- Have simple health exams 2 times a year
- Give very small amounts of blood, spit (saliva), pee (urine), poop (stool), and fluid from your nose 1 to 2 times a year

You will be paid for your time to do surveys, health exams, and medical tests.
